

# Berlin Hyp AG

## Update

### Key Rating Drivers

**Savings Banks' Support Drives IDRs:** Berlin Hyp AG's Issuer Default Ratings (IDRs) are aligned with those of the German savings banks (Sparkassen-Finanzgruppe, SFG; A+/Stable) to reflect Fitch Ratings' opinion that support from SFG would be highly likely, if required. This reflects Berlin Hyp's membership of SFG's mutual support scheme as well as SFG's ownership of Berlin Hyp via its immediate parent Landesbank Berlin Holding AG. We revised the Outlook on Berlin Hyp's Long-Term IDR in July 2021 to mirror the revision of SFG's Outlook.

**Very High Likelihood of Support:** SFG's propensity to support Berlin Hyp is very high, in our view, since a failure to do so would damage SFG's reputation and its mutual support scheme's credibility. Any necessary support from SFG would be immaterial given Berlin Hyp's small relative size (its equity equals 1% of SFG's equity). We believe SFG would be able to devise adequate and timely support measures, if needed.

**Monoline CRE Lender:** Berlin Hyp's Viability Rating (VR) reflects its business model as a specialised lender focused on the cyclical commercial real estate (CRE) sector, predominantly in Germany. Its resilient performance and sound risk appetite mitigate this concentration.

**Asset Quality to Weaken:** Berlin Hyp's non-performing loans (NPL) ratio of 0.6% at end-2020 is lower than those of most peers. This reflects the bank's prudent underwriting standards, including in international lending. We expect NPL inflows to rise in 2021 when state support measures recede and the effect of the crisis becomes more apparent.

**Pandemic Weighs on Profitability:** Our base case assumes Berlin Hyp will maintain a four-year average operating profit/risk-weighted assets (RWAs) ratio of at least 1% through the crisis. The negative outlook on the bank's earnings and profitability score reflects the risk of higher credit losses in the event of a deeper than expected recession or slower recovery.

In anticipation of a deterioration in loan quality, Berlin Hyp booked loan impairment charges (LICs) of EUR81 million in 2020 (up from almost zero on average in 2016-2019) to account for possible lending risks from the Covid-19 crisis.

**Stable Capitalisation:** Berlin Hyp's common equity Tier 1 (CET1) ratio of 13.4% at end-2020 is adequate for the bank's risk profile. We expect the bank to retain most of its profits in the coming years to mitigate the RWAs inflation from Basel IV, to which its monoline CRE lending model is particularly exposed.

**Sound Funding and Liquidity:** Berlin Hyp sources its purely wholesale funding from a diversified institutional investor base, largely through CRE-backed covered bonds. Its membership of SFG's mutual support scheme ensures privileged access to the vast excess liquidity of savings banks, whose investments in Berlin Hyp's unsecured debt carry a regulatory risk weight of 0%.

### Rating Sensitivities

**Weakening Integration within SFG:** Berlin Hyp's IDRs are primarily sensitive to changes in SFG's ratings. Changes in its ownership structure, its strategic relationship with SFG or its membership in SFG's mutual support scheme could also result in lower IDRs.

**German CRE Market Disruptions:** We would downgrade Berlin Hyp's VR if we expect its four-year average NPL ratio to exceed 3% and its four-year average operating profit/RWAs to fall below 0.8%. This could happen if the impact of the pandemic is materially worse than expected, without credible medium-term prospects to restore both ratios.

## SFG's Support Drives Berlin Hyp's IDRs and Senior Debt Ratings

Berlin Hyp is a core service and product provider to SFG. Support for the bank is likely to come collectively from SFG through Landesbank Berlin Holding AG, a non-operating holding company, whose only assets are its stakes in Berlin Hyp and Berliner Sparkasse (Berlin's savings bank, which focuses on retail and small SME banking). We view any sale of Berlin Hyp as highly unlikely in the foreseeable future, although a sale would not significantly alter SFG's franchise.

## Significant Changes

### Outlook on SFG's IDR Stabilised as Uncertainty from Pandemic Has Subsided

We revised the outlooks on SFG's Long-Term IDR, asset quality and earnings & profitability to stable from negative in June 2021 because the risk of a significant deterioration in the underlying metrics had subsided since our previous review in August 2020, and we expect the VR of 'a+' to be sufficiently resilient to plausible downside scenarios. SFG's business model focusing on lending to German SMEs and households proved resilient in 2020 despite a severe decline in GDP after repeated and extended lockdowns in Germany.

Large state programmes to support companies and households affected by the pandemic, and regulatory forbearance for the classification of crisis-driven loan payment holidays and NPLs have strongly mitigated German banks' negative rating migration, RWAs inflation, and provisioning needs since 2Q20. The extensive use of furlough schemes since 2Q20 has protected household income and contained the rise in the unemployment rate to 4.2% at end-2020. This has strongly supported borrowers' ability to service their loans. The use of loan moratoriums has been much lower than in most European countries since the start of the crisis.

Consumer spending declined less in Germany than in other European economies in 2020, despite restrictive lockdowns and tighter restrictions since December 2020. Restrictions continued for most of 1H21, requiring all non-essential outlets to close and led some regional governments to impose travel bans. Consumer spending contracted by 6.1% in 2020 compared with 11% in the UK and 8% on average in the Eurozone.

The economic performance in Germany was better than expected and better than most large European peers in 2020 as only a relatively low proportion of the economy was affected by the lockdowns. We expect the economy to regain momentum as restrictions are being eased and vaccinations progress. Fitch's June 2021 Global Economic Outlook forecasts the German GDP to recover close to its pre-pandemic level by end-2021. The legal obligation for companies that qualify for state support to file for bankruptcy was suspended until end-April 2021. We expect insolvencies in Germany to peak between 2H21 and 1H22 because we expect a large portion of government support programmes to remain in place until the end of the lockdown.

We expect SFG's impaired loans to rise moderately by end-2021, but the four-year-average NPL ratio (about 1%- 1.3% at end-2020, based on Fitch's estimation) to remain below 2% in the medium term. The NPL increase will be mitigated by the group's low risk appetite, conservative underwriting standards, strong collateral and low concentrations. We expect some of SFG's more vulnerable micro and small SME borrowers will not fully recover once state support measures are lifted, and many corporates and SMEs are likely to emerge from the crisis with durably weaker credit profiles. However, we do not expect pressure on SFG's mortgages, given robust collateralisation and the record of above-average payment behaviour on the part of borrowers.

SFG's profit was resilient in 2020 owing to its strong market position, despite LICs rising to 18bp of gross loans (7bp in 2019). In 2020, SFG's operating profit/RWAs remained robust at 0.9% (1.1% in 2019), comfortably within our expectations for an earnings & profitability score of 'a', when adjusted to neutralise the group's strongly overstated RWAs density which results from the savings banks' use of the standardised approach to assess their credit risks. We expect profitability to remain challenged in 2021, despite a recovery in business activity and consumer spending, as LICs will remain material.

### Sustainability Linked Bond Issuance

In April 2021 Berlin Hyp became the first bank globally to issue a sustainability-linked bond. The EUR500 million bond combines Berlin Hyp's strategic sustainability goals with its refinancing on the capital market. If the bank fails to achieve its target to cut the loan portfolio's carbon intensity by 40% by 2030, compared to the baseline 2020, this would trigger a step-up on the final coupon.

### Resilient German CRE Market

We believe the German CRE market will remain attractive for international investors in the next few years despite the acceleration of secular trends (e.g. working-from-home, online shopping) by the Covid-19 crisis. This attractiveness is underpinned by Germany's resilient economy, robust fundamentals and stable institutional framework. The domestic property market has remained relatively resilient and valuations are reasonable by international comparison despite strong price increases over the last decade. Investment yields remain more resilient than in many foreign markets despite a slight decrease in 1H20, driven by low transaction volumes in 2Q20 as deals were postponed or cancelled due to the pandemic.

The retail and hotel segments have been the most affected by the pandemic so far. If business travel does not rapidly return to pre-pandemic levels, these segments are likely to remain under pressure for longer. However, we do not expect the current crisis to ease the strong margin pressure that has been weighing for many years on banks' lending to German CRE projects.

### CRE Focus Brings Exposure to Substantial RWAs Inflation from Basel IV

We estimate the Basel IV RWAs output floor that will be phased in from 2022 to 2027 could inflate Berlin Hyp's RWAs by up to 20%. This would be above the average expected for the broader banking sector. This above-average sensitivity is driven by the bank's focus on income-producing CRE lending and by its use of internal rating models, which resulted in a relatively low RWAs density of 31% at end-2020. Berlin Hyp will continue to build up its capital by allocating a significant portion of its operating profits to its reserves for general banking risks ('Other non-operating items' in the income statement overleaf) in the coming years to match the RWAs inflation from Basel IV. The bank retained EUR70 million this way in 2020. We are confident that capital injections from SFG would be available should a prolonged and severe downturn prevent sufficient profit retention.

## Key Financial Metrics -Latest Developments

### Pandemic Likely to Drive Increase in Impaired Loans

In April 2020, we changed the Outlook on Berlin Hyp's asset quality score to Negative from Stable as part of the Covid-19-driven review of German banks to reflect the risk that the economic fallout from the pandemic could weigh on Berlin Hyp's asset quality over the next two years. The number of insolvencies in Germany is likely to rise significantly in 2021 as state support measures to the economy are being phased out.

The negative outlook on Berlin Hyp's asset quality score reflects our expectation that asset quality will come under manageable pressure in 2021 and potentially in 2022 due to the lagging economic impact of the pandemic. Asset quality remained resilient in 2020 as the bank's NPL ratio even declined slightly, but more time will be needed for the asset quality implications of the crisis to become clearer. The strength and pace of the post-pandemic recovery is particularly uncertain in the retail and tourism segments, but it could also speed up structural shifts for office demand. Additionally, Berlin Hyp's risk concentration exposes the bank to tail risks from dislocations in the CRE market. Both effects are likely to lead to a higher level of NPLs.

Berlin Hyp's asset quality had benefited from strong economic conditions prior to the pandemic, leading to historically low NPLs after years of decrease. The high loan concentration inherent in CRE is mitigated by the bank's focus on standard property types in more resilient locations, granular tenant structures and conservative collateral valuation.

### LICs and Margin Pressure Will Weigh on Profitability

We expect high LICs to intensify earning pressure in 2021 and 2022. Berlin Hyp booked LICs of EUR81 million in 2020 (33bp of total loans, up from almost zero on average in 2016-2019) to factor in the anticipated near-term deterioration of asset quality as a result of the economic fallout from Covid-19. However, credit risks have not yet materialised.

We expect the bank's pre-impairment profits to remain a sufficient first line of defence. Our base case assumes Berlin Hyp will maintain a four-year average operating profit/RWAs of at least 1% through the crisis, in line with its earnings and profitability score of 'bbb'.

However, a deeper than expected recession or a slower economic recovery could lead to higher than anticipated credit losses and net annual losses in the next two years.

Berlin Hyp's profitability has remained adequate and commensurate with its risk profile in recent years. However, its operating profit peaked in 2018 and weakened moderately in 2019. This is because low interest rates and considerable competitive pressure in the German CRE lending market weigh on lending margins, while net interest income dominates the bank's revenues. Low margins will weigh on revenues beyond the coronavirus crisis because the bank's new business is likely to remain predominantly domestic in the medium term.

### Adequate Capitalisation

We revised the trend on Berlin Hyp's capitalisation and leverage score to stable from negative in 4Q20. This was because our sensitivity analysis indicated robust revenues and manageable credit losses throughout the Covid-19 crisis, with only moderate pressure on capitalisation.

Berlin Hyp's fully-loaded CET1 ratio of 13.4% at end-2020 is adequate for its risk profile. The bank has stabilised its CET1 ratio in the past few years. It has done so by retaining almost half of its operating profits to match the RWAs inflation triggered by the bank's continued shift to CRE loans from public sector loans and debt securities investments. We expect the bank will continue to retain a large share of its profits to mitigate the RWAs inflation from the revised Basel III regime, to which its monoline CRE lending model is particularly exposed.

### Established Covered Bond Franchise; Privileged Unsecured Funding Access to SFG

Berlin Hyp is purely wholesale-funded and benefits from its privileged access to SFG's large excess liquidity. Savings banks purchase a large proportion of its unsecured debt, which carries a 0% regulatory risk-weight for members of SFG's mutual support scheme. The bank also aims to expand its already broad investor base outside SFG by issuing further green Pfandbriefe.

Berlin Hyp's stock of equity and debt eligible for its minimum requirement for own funds and eligible liabilities (MREL) was equivalent to a very high 57% of RWAs at end-2020 and mainly included about EUR4.6 billion of SNP bonds (45% of RWAs at end-2020). The bank has started to gradually replace maturing legacy SNP debt with cheaper SP debt, but we believe it will retain a comfortable buffer of SNP or more junior instruments over its MREL in the foreseeable future, given the long residual maturity of its stock of SNP debt.

ECB funding (predominantly TLTRO) rose to 30% of Berlin Hyp's total funding at end-2020 (see interbank on the chart across) from 8% at end-2019. This strong increase reflects the bank's opportunistic take-up of TLTRO III, whose conditions the ECB further eased in 2Q20 to tackle the impact of the pandemic. Depending on market conditions over the next few quarters, we believe the bank will arbitrage between using the large excess liquidity accumulated for new lending or to cut funding costs by reducing its stock of mortgage Pfandbriefe.

### **Adequate Liquidity Against the Background of SFG's Support**

Berlin Hyp manages its liquidity prudently. Its liquidity coverage ratio (LCR) is consistently well above regulatory requirements, and management aims to maintain a ratio of at least 120%. The bank sources a significant share of its total funding (typically mostly SNP debt) from members of SFG's mutual support scheme. The resulting above-average funding stability allows Berlin Hyp to minimise the drag on earnings from the low interest-rate environment by optimising the size of its liquidity buffer more than it would probably do if it was independent from SFG. As the share of SNP debt in the funding mix is set to decrease, so could the proportion of funding from SFG members, although we expect the latter to remain significant in the long term. The large TLTRO III take-up supports Berlin Hyp's liquidity buffer, leading to an LCR of 141% at end-2020.

## Environmental, Social and Governance Considerations

Berlin Hyp's highest level of ESG credit relevance is a score of '3'. This means ESG issues are credit neutral or have only a minimal credit impact, either due to their nature or the way in which they are being managed by the bank. For more information on our ESG Relevance Scores, visit [www.fitchratings.com/esg](http://www.fitchratings.com/esg).

### Credit-Relevant ESG Derivation

Berlin Hyp AG has 5 ESG potential rating drivers			Overall ESG Scale	
<ul style="list-style-type: none"> <li>Berlin Hyp AG has exposure to compliance risks including fair lending practices, mis-selling, repossession/foreclosure practices, consumer data protection (data security) but this has very low impact on the rating.</li> <li>Governance is minimally relevant to the rating and is not currently a driver.</li> </ul>	key driver	0	issues	5

### How to Read This Page

ESG scores range from 1 to 5 based on a 15-level color gradation. Red (5) is most relevant and green (1) is least relevant.

The Environmental (E), Social (S) and Governance (G) tables break out the individual components of the scale. The left-hand box shows the aggregate E, S, or G score. General Issues are relevant across all markets with Sector-Specific Issues unique to a particular industry group. Scores are assigned to each sector-specific issue. These scores signify the credit-relevance of the sector-specific issues to the issuing entity's overall credit rating. The Reference box highlights the factor(s) within which the corresponding ESG issues are captured in Fitch's credit analysis.

The Credit-Relevant ESG Derivation table shows the overall ESG score. This score signifies the credit relevance of combined E, S and G issues to the entity's credit rating. The three columns to the left of the overall ESG score summarize the issuing entity's sub-component ESG scores. The box on the far left identifies the [number of] general ESG issues that are drivers or potential drivers of the issuing entity's credit rating (corresponding with scores of 3, 4 or 5) and provides a brief explanation for the score.

Classification of ESG issues has been developed from Fitch's sector and sub-sector ratings criteria and the General Issues and the Sector-Specific Issues have been informed with SASB's Materiality Map.

Sector references in the scale definitions below refer to Sector as displayed in the Sector Details box on page 1 of the navigator.

### Social (S)

General Issues	S Score	Sector-Specific Issues	Reference
Human Rights, Community Relations, Access & Affordability	2	Services for underbanked and underserved communities: SME and community development programs; financial literacy programs	Company Profile; Management & Strategy; Risk Appetite
Customer Welfare - Fair Messaging, Privacy & Data Security	3	Compliance risks including fair lending practices, mis-selling, repossession/foreclosure practices, consumer data protection (data security)	Operating Environment; Company Profile; Management & Strategy; Risk Appetite
Labor Relations & Practices	2	Impact of labor negotiations, including board/employee compensation and composition	Company Profile; Management & Strategy
Employee Wellbeing	1	n.a.	n.a.
Exposure to Social Impacts	2	Shift in social or consumer preferences as a result of an institution's social positions, or social and/or political disapproval of core banking practices	Company Profile; Financial Profile

### Governance (G)

General Issues	G Score	Sector-Specific Issues	Reference
Management Strategy	3	Operational implementation of strategy	Management & Strategy
Governance Structure	3	Board independence and effectiveness; ownership concentration; protection of creditor/stakeholder rights; legal /compliance risks; business continuity; key person risk; related party transactions	Management & Strategy; Earnings & Profitability; Capitalisation & Leverage
Group Structure	3	Organizational structure; appropriateness relative to business model; opacity; intra-group dynamics; ownership	Company Profile
Financial Transparency	3	Quality and frequency of financial reporting and auditing processes	Management & Strategy

CREDIT-RELEVANT ESG SCALE	
How relevant are E, S and G issues to the overall credit rating?	
5	Highly relevant, a key rating driver that has a significant impact on the rating on an individual basis. Equivalent to "higher" relative importance within Navigator.
4	Relevant to rating, not a key rating driver but has an impact on the rating in combination with other factors. Equivalent to "moderate" relative importance within Navigator.
3	Minimally relevant to rating, either very low impact or actively managed in a way that results in no impact on the entity rating. Equivalent to "lower" relative importance within Navigator.
2	Irrelevant to the entity rating but relevant to the sector.
1	Irrelevant to the entity rating and irrelevant to the sector.

The ratings above were solicited and assigned or maintained at the request of the rated entity/issuer or a related third party. Any exceptions follow below.

Ratings may be changed or withdrawn at any time for any reason in the sole discretion of Fitch. Fitch does not provide investment advice of any sort. Ratings are not a recommendation to buy, sell, or hold any security. Ratings do not comment on the adequacy of market price, the suitability of any security for a particular investor, or the tax-exempt nature or taxability of payments made in respect to any security. Fitch receives fees from issuers, insurers, guarantors, other obligors, and underwriters for rating securities. Such fees generally vary from US\$1,000 to US\$750,000 (or the applicable currency equivalent) per issue. In certain cases, Fitch will rate all or a number of issues issued by a particular issuer, or insured or guaranteed by a particular insurer or guarantor, for a single annual fee. Such fees are expected to vary from US\$10,000 to US\$1,500,000 (or the applicable currency equivalent). The assignment, publication, or dissemination of a rating by Fitch shall not constitute a consent by Fitch to use its name as an expert in connection with any registration statement filed under the United States securities laws, the Financial Services and Markets Act of 2000 of the United Kingdom, or the securities laws of any particular jurisdiction. Due to the relative efficiency of electronic publishing and distribution, Fitch research may be available to electronic subscribers up to three days earlier than to print subscribers.

For Australia, New Zealand, Taiwan and South Korea only: Fitch Australia Pty Ltd holds an Australian financial services license (AFS license no. 337123) which authorizes it to provide credit ratings to wholesale clients only. Credit ratings information published by Fitch is not intended to be used by persons who are retail clients within the meaning of the Corporations Act 2001.
